

CO2 Management AS joins CEMS Global Alliance as Corporate Partner

CO2 Management AS joins the network of the CEMS Global Alliance as Corporate Partner. The cooperation intends to enrich the knowledge and experience of the students, the network as a whole and the corporate strategy of the company.

CO2 Management AS is delighted to announce that it has joined CEMS as a corporate partner. CEMS is a Global Alliance consisting of leading academic institutions, multinationals and NGOs that together offer the CEMS Master in International Management (MIM) degree.

The CEMS Global Alliance's goal is to prepare leaders of tomorrow by providing them experiential learning during the course of CEMS MIM degree, with a focus on sustainability and excellence. This creates a strategic fit between CEMS and CO2 Management as the partnership will allow highly qualified, open-minded young professionals to embed themselves in the sustainably oriented business activities of CO2 Management and draw on the company's experiences. Moreover, it will enable CO2 Management to get a fresh, out of the box perspective on potential opportunities and challenges as well as participate in academic and hiring activities at CEMS partner institutions.

In the spring semester of 2021, as part of the CEMS Global Alliance, CO2 Management will be collaborating with Norwegian School of Economics, Copenhagen Business School and Stockholm School of Economics for CEMS business projects. Student teams from each school will work in tandem with the leadership of CO2 Management to build sustainable and prospered societies by aiming to reach the climate goals. The three schools will interact in virtual teams, allowing the students to experience a real team approach in these demanding times influenced by the Covid-19 pandemic, and take advantage of potential synergies.

"This is a mutually beneficial partnership. The students will be exposed to the innovative and developing world of carbon capture while we will be able to get a fresh perspective on our operations", commented Dr. Torsten Porwol, Managing Director of CO2 Management AS. "This is a strategic partnership as CO2 Management and CEMS Global Alliance both have focus on solving today's global challenges", he added.

CO2 Management is looking forward to working with international minded and high-caliber students that are at the heart of CEMS and want to take initiative for a more sustainable and inclusive world.

Company Profile

CO2 Management AS was established in 2019 as a Petrolia SE network company in Bergen, Norway. The company is an independent supplier and provider of sustainable turnkey solutions for capture and storage of CO₂. The range of services includes the capture of CO₂ at industry source points and all further steps necessary for safe final storage under the seabed off the Norwegian coast. The company invests in future-oriented technologies that sustainably reduce the CO₂ footprint of its customers. In addition, advisory services relating to carbon capture and storage are also provided to clients.
